## SUMMARY

First-year Software Engineering student at QUB with hands-on production backend experience — Kafka-based distributed systems, mTLS, Go and TypeScript at Zardan Systems. Seeking a backend software engineering internship or junior role.

## EXPERIENCE

### Backend Developer — Zardan Systems (Software Startup)

October 2025 – Present

- Built a NestJS adapter responsible for receiving frontend requests, producing and consuming Kafka messages to/from the orchestrator and monitoring services, and ensuring idempotency of credit applications — preventing duplicate bureau requests and eliminating unnecessary costs.
- Developed a Go microservice used by the orchestrator to retrieve data from an external database and return it downstream.
- Implemented secure service-to-service communication using mutual TLS (mTLS).
- Built mock services for end-to-end testing: a frontend request simulator and a BKI (credit bureau) mock implementing full authentication, authorisation, and report-type-based response logic enabling realistic integration without hitting live bureaus.

### Software Development Trainee — Belfast Met & FIT (sponsored by Bank of America)

July 2025 – October 2025

- Completed software development programme (Python, SQL, relational data modeling), awarded First Distinction.
- Built REST-style backend components and SQL queries.

### Mathematics Tutor / Academic Curator — StudentUA

August 2024 – July 2025

- Tutored individuals/groups, improved comprehension and engagement via clear explanations/structured guidance.

## PROJECTS

### [Loan Company — Spring Boot Backend Platform](#)

- Designed and implemented REST APIs for loan application, approval, and payment workflows using Spring Boot.
- Implemented authentication and role-based access control using Spring Security and JWT.
- Integrated PostgreSQL using JPA/Hibernate and native SQL queries.
- Used Kafka + Redis for reliable event-driven processing and transactional persistence.

### [NestJS REST API — Pet Project](#)

- Built a production-grade social media REST API with JWT auth, refresh token rotation, RBAC, unit and e2e tests.
- Designed modular architecture with TypeORM, Redis caching, rate limiting, and email verification flow.
- Deployed on Railway (backend + PostgreSQL + Redis) and Vercel (frontend), with CI/CD through GitHub Actions.

## SKILLS

**Languages:** Java, C/C++, Python, JavaScript, TypeScript, Go, SQL

**Frameworks:** Spring Boot, NestJS

**Databases:** PostgreSQL, Redis, MySQL, SQLite

**Messaging:** Apache Kafka

**DevOps:** Docker, Docker Compose, GitHub Actions, Git

**Testing:** JUnit, Jest

## EDUCATION

### BEng Software Engineering — Queen's University Belfast (Year 1)

September 2025 – Present

First semester: Java 80% (First Class), remaining modules Upper Second.

### BEng Software Engineering — Igor Sikorsky Kyiv Polytechnic Institute

September 2024 – July 2025

(Year 1, avg. 87.25%) Modules: Java, C/C++, Networks, Algorithms & Data Structures, Programming Fundamentals.

## CERTIFICATIONS

- SQL Certification — Belfast Digital Skills Academy (2025)
- AWS Cloud Practitioner Essentials — AWS Skill Builder (2026)

## LANGUAGES

**English** — Upper-Intermediate (IELTS Academic 6.0, 2025)    **Ukrainian** — Proficient (C2)    **Russian** — Proficient (C2)
